Our Family Care Program

Your child has been placed on our observation recall program. The observation part of the program is provided as a courtesy of our office at no charge. Dr. Harnick will determine at what interval he needs to see your child.

Dr. Harnick feels that by monitoring your child's developing jaw structure and teeth, he can determine when it is best to intervene with orthodontic treatment if necessary. Occasionally, a guidance appliance may need to be placed. There would be a fee for this service. Generally these procedures, help to guide the teeth into the mouth in a much better position. Sometimes, this can reduce or eliminate the need for future orthodontic treatment.

By taking part in this program, it should be a great advantage. This will give your child something to really smile about.
